## PROFESSIONAL SUMMARY

IT support professional in HRIS and field engineering roles who builds and tests AWS infrastructure in personal projects. Wrote the Terraform for a disaster recovery proof of concept with CI checks and timed recovery drills, built an event-driven incident response platform with approved, audited remediation, and runs a live serverless application on AWS. Hands-on with IAM, VPC networking, monitoring, Linux and automation, and moving toward cloud infrastructure and reliability work.

## TECHNICAL SKILLS

**AWS (hands-on):** EC2, VPC, IAM, IAM Identity Center, S3, Lambda, API Gateway, DynamoDB, EventBridge, SNS, CloudWatch, Systems Manager, EBS, Cognito, AppSync, Amplify, CloudFront, AWS Budgets
**IaC & CI/CD:** Terraform, GitHub Actions, TFLint, Trivy, Git, Docker Compose (local and CI tests), disaster recovery testing
**Linux & Networking:** Amazon Linux 2023, Nginx, TCP/IP, DNS, DHCP, subnetting, routing, security groups, VPC endpoints, VLANs
**Scripting & Automation:** Python, TypeScript, PowerShell, Bash, C#, REST APIs, Power Automate, Power BI

## SELECTED PROJECTS

**BayanihanDR: AWS Disaster Recovery (proof of concept)** | Terraform, EC2, S3, GitHub Actions | GitHub Nov 2026

- Wrote five Terraform modules that keep a low-cost standby and, on approval, create an IMDSv2-only EC2 recovery host with no inbound ports; state lives in an encrypted S3 backend, and access uses IAM Identity Center and Session Manager.
- Validated with GitHub Actions CI (terraform fmt, validate, test on a mocked provider, TFLint, Trivy) and real AWS drills: the final drill restored the PostgreSQL app in 5 min 29 s with 26 s of data loss (synthetic data; targets 30/60 min).

**Opsentra: AWS Incident Response Platform** | Lambda, EventBridge, Systems Manager, Terraform | GitHub Nov 2026

- Built an event-driven incident pipeline: a probe Lambda feeds a CloudWatch alarm that EventBridge routes to Lambda, which opens one deduplicated incident in DynamoDB and sends one SNS alert; a reconciler catches missed events.
- Limited fixes to allowlisted, hash-pinned SSM runbooks that an operator requests and an admin approves (Cognito roles, JWT on API Gateway); incidents close only after 3 healthy probes. Tested with pytest, Vitest and Playwright.

**Teolohiya.site: Serverless Web Application** | Amplify Gen 2, Cognito, AppSync, DynamoDB | Live site 2026

- Run a live, moderated listing site where Cognito groups and IAM roles gate access, AppSync serves GraphQL over DynamoDB, and Lambda performs every approval, so unreviewed listings and photos stay out of the public table and S3 path.
- Backend defined as code with Amplify Gen 2 (CDK/CloudFormation) and released through sandbox testing; no NAT gateway or always-on compute.

**Serverless Ticketing API** | API Gateway, Lambda (Python), DynamoDB, SNS, CloudWatch | GitHub Oct 2026

- Built six HTTP API routes on DynamoDB with a status index and priority-based SLA due dates; a DynamoDB Streams trigger sends Critical tickets to SNS email.
- Scoped one IAM role per Lambda to specific table, index, stream and topic ARNs, throttled the API to 5 requests/s, and added JSON logs and a CloudWatch error alarm.

**Secure EC2 Web Server** | VPC, EC2, IAM, EBS, Nginx | GitHub 2026

- Built a custom VPC (10.0.0.0/16) with subnet, internet gateway and route table to serve Nginx on Amazon Linux 2023; limited SSH to one IP, added an instance role for Session Manager, root MFA, an EBS snapshot and a budget alert.

## PROFESSIONAL EXPERIENCE

**HRIS Technical Support (Level 1)** | First Maritime Shared Services / PTC Group, Makati Jul 2026 – Present

- Provide Level 1 application support for seafarers and office staff on a cloud HRIS: triage issues, guide users to resolution and escalate complex cases.
- Built a daily Power Automate flow that scans SharePoint, flags templates untouched for 7+ days and upserts their status into an Excel Online table behind a Power BI dashboard, replacing manual checks of about 29 templates across 9 business units.
- Support the HRIS rollout with the vendor and internal teams: data gathering, template validation and issue follow-up.

**Field / Onsite Engineer** | HP Service Center / Actionlabs IT Services Phils Corp, Makati May 2025 – Nov 2025

- Diagnosed and repaired hardware, OS and peripheral faults on HP laptops, workstations, printers and POS systems at client sites; reinstalled operating systems, explained findings to users and recorded each service action.

**IT Intern / C# Programmer** | TechFactors Inc., Quezon City Jan 2024 – Jul 2024

- Developed front-end and back-end features, including REST API work, for company C# applications.

## CERTIFICATIONS

**AWS Certified Cloud Practitioner** | Amazon Web Services | Oct 2026 | Verify
**AWS Certified AI Practitioner** | Amazon Web Services | Jul 2026 | Verify
**Oracle Cloud Infrastructure Foundations Associate** | Oracle | Oct 2026 | Verify
**Oracle Cloud Infrastructure AI Foundations Associate** | Oracle | Oct 2026 | Verify
**Training:** Google IT Support Professional Certificate (2026); Cisco CCNA ITN (2021) and SRWE (2022); NDG Linux Essentials (2023)

## EDUCATION

**BS Information Technology, Major in Animation and Game Development** | FEU Institute of Technology 2025
