JERVIL ANGELO D. DE LEON

Junior Cloud Engineer | AWS, Terraform, Linux, Networking
Makati City, Philippines | 0962 586 5208 | deleonangelojervil@gmail.com
linkedin.com/in/jervilangelo | github.com/jervilangelo | jervilangelo.online

SUMMARY

IT support professional with field engineering and enterprise HRIS support experience, moving into cloud infrastructure through hands-on Amazon Web Services (AWS) projects. Built BayanihanDR, a Terraform-provisioned disaster recovery environment on AWS with CI/CD checks in GitHub Actions and a timed recovery drill (5 min 29 s against a 30-minute target), built Opsentra, an event-driven incident response platform with approved, audited remediation and verified recovery, and operates Teolohiya.site, a live serverless application. Works daily with incident triage, escalation and documentation, and applies the same habits to infrastructure work. AWS Certified Cloud Practitioner, currently preparing for AWS Solutions Architect – Associate (SAA-C03).

SKILLS

Cloud (AWS): EC2, VPC, IAM, IAM Identity Center, S3, Lambda, API Gateway, DynamoDB, EventBridge, SNS, CloudWatch, Systems Manager (Session Manager), EBS, Cognito, AppSync, Amplify, CloudFront, ACM, AWS Budgets

Infrastructure as Code (IaC) and CI/CD: Terraform (modules, S3 remote state, terraform test), TFLint, Trivy, GitHub Actions, Git, Docker Compose

Networking: TCP/IP, DNS, DHCP, OSI model, subnetting, route tables, security groups, VPC endpoints, VLANs, static routing

Systems: Linux (Amazon Linux 2023), Windows, Windows Server, Active Directory fundamentals, Nginx, VMware Workstation

Scripting and automation: Python, TypeScript, PowerShell, Bash, Power Automate, Power BI, SharePoint

Databases: DynamoDB, PostgreSQL

Support and operations: incident triage, escalation, hardware and OS troubleshooting, technical documentation

PROJECTS

BayanihanDR: AWS Disaster Recovery with Terraform | Terraform, EC2, S3, VPC, IAM, Systems Manager, GitHub Actions | Nov 2026
github.com/jervilangelo/bayanihan-dr

- Provisioned a standby and recovery environment on AWS with five Terraform modules (networking, compute, storage, identity, monitoring), switched by one recovery variable, with remote state in a versioned, encrypted S3 bucket using native lockfile locking.
- Recovered a FastAPI and PostgreSQL 16 application in 5 min 29 s with 26 s of data loss in the final AWS test drill, against targets of 30 min RTO and 60 min RPO; 10 of 10 post-recovery checks passed.
- Scheduled hourly pg_dump backups, each restored into a throwaway database and row-counted before being copied to S3.
- Built a GitHub Actions CI pipeline running terraform fmt, terraform validate, terraform test against a mocked AWS provider, TFLint and a Trivy misconfiguration scan.
- Removed SSH keys, IAM users and long-lived access keys: operator access through IAM Identity Center, host access through Session Manager, and separate least-privilege IAM roles for the host and the backup writer.
- Hardened the design with IMDSv2-only EC2, encrypted gp3 volumes, a private TLS-only backup bucket with versioning and lifecycle rules, no inbound security group rules, and an S3 gateway endpoint instead of a NAT gateway; recorded compute spend for the project was about USD 0.01.

Opsentra: AWS Incident Response Platform | Lambda, EventBridge, CloudWatch, Systems Manager, Terraform | Nov 2026
github.com/jervilangelo/opsentra

- Built an event-driven incident pipeline on AWS: a probe Lambda checks a disposable EC2 and Nginx lab every minute, a CloudWatch alarm is routed by EventBridge to Lambda, which opens one deduplicated incident in DynamoDB and sends one SNS alert; a reconciler runs every 2 minutes to catch missed events.
- Limited remediation to allowlisted, hash-pinned Systems Manager runbooks that an operator requests and an admin approves, with every action recorded in an append-only audit trail; incidents close only after 3 healthy probes, and escalate if SSM reports success while the service is still down.
- Secured the API with Cognito roles (viewer, operator, admin), JWT auth on every API Gateway route except health, idempotency keys on writes and least-privilege IAM, with no IAM Access Analyzer findings.
- Provisioned the control plane and disposable lab with Terraform across ten gated phases, tested with pytest, Vitest, Playwright and axe; the lab costs about USD 0.01 to 0.02 per hour while it exists.

Teolohiya.site: Live Serverless Web Application | Amplify Gen 2, Cognito, AppSync, DynamoDB, Lambda, S3 | teolohiya.site

- Built and operate a moderated book listing site on AWS Amplify Gen 2 in ap-southeast-1, with Cognito sign-in, an AppSync GraphQL API and DynamoDB models that keep private listing data separate from public listings.
- Implemented role-based moderation through Lambda admin actions and split S3 photo uploads into pending and approved paths to control public access.
- Kept the architecture serverless with no NAT gateway or always-on compute, served it through CloudFront with an ACM certificate, and set AWS Budgets cost alerts.

AWS Serverless Ticketing API | API Gateway, Lambda (Python), DynamoDB, SNS, CloudWatch, IAM | Oct 2026
github.com/jervilangelo/aws-serverless-ticketing-api

- Built a six-route REST API for HRIS support tickets on an on-demand DynamoDB table, with a status index for filtered queries and priority-based due dates (Critical 4 h, High 8 h, Medium 24 h, Low 72 h).
- Scoped one IAM role per Lambda function to the specific table and index ARNs, and throttled the API at 5 requests per second (burst 10).
- Connected DynamoDB Streams to a second Lambda that sends critical tickets to SNS email, added a CloudWatch alarm on handler errors, and tested every route and error case (400, 404) from PowerShell.

Secure EC2 Web Server | EC2, VPC, IAM, Systems Manager, EBS, Nginx, Amazon Linux 2023 | 2026
github.com/jervilangelo/secure-ec2-web-server

- Deployed Nginx on Amazon Linux 2023 in a custom VPC (10.0.0.0/16), configuring the public subnet, internet gateway and route table.
- Restricted SSH to a single IP, enabled Session Manager access through an instance IAM role, enforced MFA on the root account, took an EBS snapshot backup and set a budget alert.

WORK EXPERIENCE

HRIS Technical Support (Level 1) | First Maritime Shared Services / PTC Group, Makati | Jul 2026 – Present

- Provide first-line application support for seafarers and office employees: investigate reported HRIS issues, guide users to resolution and escalate complex cases to the right team.
- Built a daily Power Automate flow that scans a SharePoint library, flags templates untouched for 7 days and updates an Excel Online table feeding a Power BI dashboard, replacing manual checks of about 29 templates across 9 business units.
- Coordinate with the HRIS vendor and internal stakeholders during implementation, covering data gathering, template validation, issue follow-up and status tracking.
- Document procedures, recurring issues and fixes so support stays consistent across the team.

Field / Onsite Engineer | HP Service Center / Actionlabs IT Services Phils Corp, Makati | May 2025 – Nov 2025

- Diagnosed and repaired hardware, software and peripheral faults on HP laptops, workstations, printers and POS systems at client and partner sites.
- Installed operating systems and ran component diagnostics to return devices to service.
- Explained findings to end users and client contacts, coordinated next steps and recorded completed service actions.

IT Intern / C# Programmer | TechFactors Inc., Quezon City | Jan 2024 – Jul 2024

- Developed front-end and back-end features for company C# applications, including REST API work, as part of a software delivery team.

CERTIFICATIONS

- AWS Certified Cloud Practitioner | Amazon Web Services | 2026
- AWS Certified AI Practitioner | Amazon Web Services | 2026
- Oracle Cloud Infrastructure Foundations Associate | Oracle | 2026
- Oracle Cloud Infrastructure AI Foundations Associate | Oracle | 2026
- Google IT Support Professional Certificate | Google | 2026
- Google System Administration and IT Infrastructure Services | Google | 2026
- Cisco Networking Academy: CCNA Introduction to Networks (2021); CCNA Switching, Routing and Wireless Essentials (2022); CyberOps Associate (2022); NDG Linux Essentials (2023); Networking Basics (2026)
- IT Specialist: Databases | Certiport | 2022
- In progress: AWS Certified Solutions Architect – Associate (SAA-C03)

EDUCATION

BS Information Technology, Major in Animation and Game Development | FEU Institute of Technology | 2025
